

Plug'n Pack

The rapid sleeve pack system

Consisting of a TRIPLEX pallet enclosure and corner fixtures, the Plug'n Pack-System transforms all conventional pallets in no time at all into a sleeve pack system – optionally with lid, making it even stackable as well.

Simply turning your pallet into a container

Comprising a pallet sleeve and four corner adapters, the Plug'n Pack system will convert any conventional single-use or reusable pallet into a container in next to no time. What makes this system so special are its stable corner adapters, which are simply placed on the pallet and provide a non-slip fixing for the pallet sleeve. When using a Euro pallet, the system can be fitted with an appropriate lid, if required, meaning the containers can even be stacked. For all pallet dimensions individual protective lid solutions may be made to measure out of TRIPLEX structured core panels.

After use, the corner adapters can be removed and reused on another pallet. However, these adapters can also be screwed to a wooden pallet, turning it permanently into a fold-down, reusable container.

The pallet enclosure of the Plug'n Pack-Systems may be designed according to your individual needs. Options to select include different material thickness and area weights, sleeve heights, closed edges, grip holes, document pouches, base trays and customized prints. Due to its arbitrary sleeve height when using the stacking lid, the Plug'n Pack system helps to make optimal use of loading space and thus reduces CO₂-emission during transport.

Plug'n Pack in brief:

- System components: pallet sleeve and four corner adapters
- Compatible with all conventional single-use and reusable pallets (with no need for modifications)
- Exceptionally easy handling
- Very stable, but lightweight
- Enclosures can be configured in custom heights
- Lids and protective covers available as optional extras
- Stackable when used on Euro pallets and with an appropriate lid
- All system components are reusable
- 100% recyclable
